

TERMINAL ARRANGEMENTS

This terminal arrangement listing is a ready reference for all units in the Linear Standard, Hipermalloy, Ultra Compact, Ouncer, and Plug In lines of UTC transformer components.

To use this reference, look up the type number of the unit in the first column. The number in the corresponding second column, when looked up on the following pages, will indicate the primary terminal connections. The number in the third column, when found in the following pages, will indicate the secondary terminal connections. The letter in the fourth column is indicated on page four above a schematic diagram, showing the actual winding-terminal arrangement.

Where no type number or no pri. and sec. numbers are shown, the transformer terminal board markings are self explanatory. Transformer terminals marked $\underline{\underline{\quad}}$ are grounded to case.
